INSTRUCTION MANUAL OF ARTICULATORS AND FACEBOWS

1 - INTRODUCTION

Attention: Before using your Bio-Art Articulator, please read the entire instruction manual carefully.

The Articulator is an instrument used to simulate the patient's maxillo-mandibular relationships and movements in the laboratory, with the aim of studying occlusion and making devices that will later be used by the patient. Examples: complete dentures, fixed partial dentures, removable partial dentures, bite plates (bruxism) and others.

The Facial Arch is an instrument used to record the spatial position of the patient's upper dental arch in relation to the skull and transfer this record to the articulator.

Bio-Art semi-adjustable articulators are conventional Arcon-type instruments (models 4000-S, A7 Plus and A7 Fix). Therefore, the technical assembly procedures are the same for these articulators.

Attention: The articulator and facial arch are products intended for use by qualified professionals only. Use of the device by untrained professionals can cause damage to the product itself and/or to the patient.

It is important to note that the semi-adjustable articulator and the Bio-Art facial arch offer a simple and quick process for reproducing mandibular movements, with a high level of precision at a low cost, when compared to techniques that involve considerable time consumption and the use of expensive and complex equipment or work carried out with simple "occluders" (hinges), where the assembly of the models is arbitrary and the movements limited.

We concluded that the use of a semi-adjustable articulator and facial arch is recommended for most prosthetic, occlusion and orthodontic work, among others, and is a simple, quick and easy technique that guarantees both the patient and the professional a very satisfactory result.

In the event of any serious incident occurring in relation to the device, the user and/or patient must notify Bio-Art Equipamentos Odontológicos Ltda and the competent authority in their country.

2 - SAFETY PRESCRIPTIONS

- This manual contains only basic and simplified information on the use of the appliance, which does not replace the appropriate occlusion and/or prosthetics course offered in many educational institutions and dental schools as a compulsory subject.
- Bio-Art facial arches are designed to be used with Bio-Art articulators and vice versa.
- Bio-Art articulators do not offer interchangeability, i.e. dental arch models mounted on one articulator must not be transferred (mounted) to any other articulator. Therefore, Bio-Art does not guarantee accuracy for this procedure with these articulators.
- For the interchangeability of mounted dental arch models between Bio-Art articulators, we offer the standardization feature (factory calibration) for the A7Plus and A7Fix types, allowing models to be transferred between these articulators.

- Before using the articulator and facial arch, professionals should check that the appliance has not been damaged and that there are no distortions in the incisal pin, parallelism of the arch, centricity of the incisal pin in relation to the lower ramus, etc. If there are any abnormalities, you should then contact Bio-Art Technical Assistance or an Authorized Representative.
- Before using the facial arch, it should be cleaned with warm water, the fork sterilized in an autoclave and the auricles disinfected with a bactericidal wipe or 70° alcohol.
- Bio-Art only recommends warm water for general cleaning of the articulator and facial arch.

The articulator is a precision device that must be handled, transported and stored with care. To ensure this precision, Bio-Art has designed an exclusive plastic case to accommodate it and make it easy to transport.

3 - SERIOUS INCIDENT

User/patient, please report any serious incident occurring in relation to this device to Bio-Art Equipamentos Odondológicos Ltda. and to the competent authority in your country.

➡ 4 - PARTICULARITIES OF THE BIO-ART ARTICULATORS

Interchangeable joints (optional)

• The interchangeable articulators are supplied standardized (factory calibrated), so that the plaster models can be interchanged (transferred) between these articulators. Only the 4000-S model cannot be supplied standardized.

Modelo Characteristics	4000-S	A7 Fix	A7 Plus
Classification	Arcon	Arcon	Arcon
Condyllic Guide	Adjustable / Curved	Curved Fixed at 30°	Adjustable / Curved
Bennet's angle	Adjustable	Fixed at 15°	Adjustable
Intercondylar distance	Adjustable*	Fixed at 110mm	Fixed at 110mm
Centric lock	No	Sim	Sim
Stabilizer system**	O-ring Side Joint	Magnetic Side Joint	Silicone Side Joint

5 - PARTICULAR FEATURES OF THE STANDARD FACEBOW

The Standard Facial Arch is a simple and easy-to-use model (conventional system). It has hand-tightening butterfly nuts for fixing the fork, eliminating the inconvenience caused by using wrenches (fig.1).

In this model, the position of the patient's upper arch in relation to the skull is transferred by attaching the complete facial arch to the upper branch of the articulator (Figs. 2 and 3).

The Standard Facial Arch is suitable for most Bio-Art articulator models.

6 - PARTICULARITIES OF THE ELITE FACEBOW

The Elite Facial Arch has an articulation and fork fixation system that enables faster registration for the professional and more comfortable registration for the patient (figs. 1 and 2), as well as a transfer set that eliminates the need for the arch in the process of assembling the models in the articulator, making this process more practical and stable (fig. 3).

Its Naziun height-adjustable dial and infra-orbital indicator make registration even more precise.

This model is equipped with a smooth sliding system (opening and closing) which makes it easier to handle. Its auricles are anatomical, removable and autoclavable.

The Elite Facial Arch is suitable for most Bio-Art articulator models.

► 8 - TECHNICAL ASSISTANCE

For your safety, this product should be serviced by authorized persons / companies. Check the Authorized Technical Assistance centers on our website: http://www.bioart.com.br

🗩 9 - WARRANTY TERM 🖣

BIO-ART Equipamentos Odontológico Ltda., grants a 1-year warranty, counted from the date of purchase of the product (purchase invoice). The warranty is provided exclusively by the authorized distributor and includes any manufacturing defects, and is provided upon repair of the product and subject to the following requirements:

• That the product has been used correctly according to the instructions described in the instruction manual;

• The complaint must be accompanied by the purchase invoice and registered within the warranty period, followed by a report with a description of the defect and product serial number;

- The product is used, transported and stored with care;
- The transportation cost (round trip) is paid by the customer;

Warranty limitations:

- · Natural wear of parts;
- Misuse, falls or accidents;
- Improper transportation;
- · Repair by unauthorized persons;
- Use in non-compliance with the product's characteristics and purposes;
- Wear by exposure to adverse conditions (humidity, intense cold and heat);
- · Damage due to lack of cleaning or maintenance with inappropriate products;

In case of doubts, refer to the manufacturer:
